Alternate Final Project

- Creating 3 Mail enabled users.
- Create 2 mailbox databases. Show the location of the database in Windows explorer. Move a user mailbox from one mailbox database to mailbox database.
- Create a Shared mailbox. Add 2 users to the shared mailbox. Send a mail to 2 other users showing that the email originated from the shared mailbox.
- Create a distribution group in exchange server. Add 3 members to the group. Group owners don't have to group members. Members can be added only by the group owner. Send a mail from any user to the distribution group and show that, at least one of the members received the mail. You can select other options as you deem fit.
- Configure send on behalf permission in Exchange 2019

Take a screenshot of the steps required to accomplish the above and the results.
